

### General Info

The Basket is a handy tool to capture the cut-out samples and or the waste material, keeping the workspace clean. It can capture several meters of roll material depending on the stiffness. It is not intended to capture complete rolls.

The Basket is mounted on sturdy rollers casters so it can be easily moved around. Magnets keep the trolley in position when placed in front of the table.

The front part can be tilted so the table is easily accessible for the operator.

To empty the basket the Front bar can be moved to a lower position. This way the content of the basket moves up and can be easily reached.

The basket can also be taken out to carry and idle it completely.

### Article info and availability.

Summa order part number: # 500-9120: Basket F1612

The reseller NET purchase price = 490,00 Euro , net order price

The F1612-Basket is available at Summa Gistel

Note: The basket is packed disassembled.
